

## Script Video Seven: From gathering to analyzing

After long and painstaking process of gathering data both Yousuf and Alice were able to cover the people in their area of the town.

But a scientific process only starts with gathering data. Analysis is also important, and Theodor is creating a second leg of the project - one where citizen scientists are asked to help with making sense of the versatile symptoms and side effects of Covid-19.

Both our protagonists have decided to continue helping the scientific effort by adding their talents and computer processing time to the common cause.

Both Yousuf and Alice were aware how important it was to keep the sensitive information safe and turned to Theodor for guidance what anti-spyware software to install and how to protect better their computers.

Theodor was delighted to provide in-dept guidance on that topic.
